

METRIC

UPGRADES

A SIMPLE GUIDE TO UPGRADING YOUR METRIC CRUISER

METRIC STAGE 1 UPGRADE EXPLANATION:

The Metzeler Stage 1 upgrade helps you improve the mileage, ride, handling, and looks without modifying your bike. A true BOLT-ON upgrade for everyone!

METRIC STAGE 2 UPGRADE EXPLANATION:

The Stage 2 upgrade requires modification to your motorcycle's wheels, fenders, spacers and the purchase of other small products to achieve the look and ride you want. Metzeler offers more sizes than any other tire company, all with the same famous upgrades for ride, handling and looks.

ME880 MARATHON

MILEAGE: Advanced Silica Compound reduces rolling resistance, which increases mileage. Advance Silica compounding allows softer compounds to be used, while retaining high mileage. Most consumers get 2000 (or more) miles than O.E. tires.

WET GRIP: Advanced Silica Compound combined with tread pattern, significantly increases wet grip.

RIDE COMFORT: Softer ride due to high-quality construction materials. Premium constructions provide great bump absorption and a superior ride to many OE tires. These constructions do require higher air pressures. (max sidewall pressure for double-up riding).

MANY ME880'S INCLUDING 240, 260, 280, 300 & NEW 21" 260 REAR MODELS: 0° steel belting resists centrifugal growth and tire deformation, creating more stable contact patch, aiding traction and extending tire life.

NOTE: While every effort has been made to check the clearances on each bike, the owner should measure his bike to verify that clearances are met. Modified, lowered motorcycles may have clearance problems that should be checked.

PLEASE CONSULT METZELER'S FULL LINE BROCHURE FOR RECOMMENDED AIR PRESSURES AND STAGE 2 RIM SUGGESTIONS.
